

Daniel Hardy Camacho

Software Engineer

+(63) 993 255 6744 | danielcamacho0416@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#) | Metro Manila, Manila

Professional Summary

Software Engineer with hands-on experience building scalable full-stack applications using React, Next.js, Node.js, and NestJS. Experienced in delivering enterprise software, collaborating within Agile teams, and designing maintainable systems using modern software architecture principles.

Technical Skills

Programming Languages: JavaScript, TypeScript, Python, Java

Backend & Databases: Node.js, Express.js, NestJS, FastAPI SQL, PostgreSQL, Firebase, Supabase, NeonDB

Frontend: React, Next.js, Tailwind CSS

Tools and Platforms: Git, GitHub, AWS, GCP, Vercel, Gemini, Claude, OpenAI

Professional Experience

Software Engineer Intern

June 2026 - Present

Aboitiz Foods

Makati, Metro Manila

- Spearheaded the full-stack development of the Micro Ingredient Library Enterprise System using React, Next.js, Node.js, and NestJS, delivering a centralized platform for company stakeholders across 4 manufacturing sites/business units.
- Collaborated with cross-functional teams including QA, Product, and Business stakeholders to ensure successful deployment.
- Streamlined software delivery by implementing Agile methodologies and facilitating cross-functional Scrum coordination.
- Maintained and enhanced existing codebases by applying decoupled architectures, significantly improving system maintainability and overall engineering velocity.

Web Development Lead

August 2025 - June 2026

Google Developer Groups on Campus - PLM

Intramuros, Metro Manila

- Led a 10-person engineering team to develop and deploy full-stack organizational web platforms.
- Coordinated technical training workshops and seminars, educating over 100 attendees on modern programming standards.
- Standardized development workflows and implemented decoupled architectures to optimize maintainability.
- Delegated project milestones and coached team members, significantly strengthening overall engineering velocity.

Projects

PORTIA Programming Language & Compiler

July 2025 - May 2026

Designed a custom procedural programming language and spearheaded the core development of its compiler to process high-level instructions.

- Engineered lexical analysis, syntax parsing, and semantic validation modules to translate programs into three-address intermediate code (TAC).
- Built foundational language features, control structures, and symbol table management systems utilizing React, Node.js, FastAPI, and Python.

Sta. Mesa 587 Connect

July 2025 - May 2026

Directed an Agile team of 4 to build a centralized citizen portal automating government processes for over 1,000 residents.

- Developed robust backend services utilizing Next.js, PostgreSQL, and Firebase to manage document requests, incident reports, and municipal announcements.
- Designed a secure resident verification system incorporating OTP authentication and role-based administrative access.

Smart Multi-Institute Queuing System

February 2025 - December 2025

Led the backend architecture of an AI-powered government queuing platform supporting applicant, staff, and administrative interfaces.

- Engineered an intelligent queue management algorithm implementing priority handling and FIFO scheduling with round-robin counter distribution.
- Built an AI-assisted workflow utilizing the Google Gemini API and implemented session-based state management via SQLite and Express to enable real-time tracking and multi-device monitoring.

Education

Pamantasan ng Lungsod ng Maynila

Bachelor of Science major in Computer Science

August 2023 - Expected May 2027

Overall GWA: 1.33
